DETAILED ACTION

Allowable Subject Matter

1. Claims 1-34 allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed because the prior arts of record do not teach or disclose an optical signal transmitting apparatus for transmitting a FM batch converted signal with a frequency-multiplexed first signal being frequency-modulated in batch and a second signal as an optical signal, the apparatus is configured to transmit the optical signal including the FM batch converted signal and the second signal wherein:

the center frequency of the FM batch converted signal is set to be less than or equal to a value obtained by subtracting the half of the occupied frequency bandwidth of the FM batch converted signal and the half of the occupied frequency bandwidth of the second signal from the center frequency of the second signal.

Claim 7 is allowed because the prior arts of record do not teach or disclose an optical signal receiving apparatus for receiving an optical signal including a FM batch converted signal with a frequency-multiplexed first signal being frequency-modulated in batch and a second signal, the apparatus is configured to receive the optical signal to demodulate the FM batch converted signal and the second signal, wherein:

the center frequency of the FM batch converted signal is set to be less than or equal to a value obtained by subtracting the half of the occupied frequency bandwidth

of the FM batch converted signal and the half of the occupied frequency bandwidth of the second signal from the center frequency of the second signal.

Claim 12 is allowed because the prior arts of record do not teach or disclose an optical signal relaying apparatus for transferring an optical signal including a FM batch converted signal with a frequency-multiplexed first signal being frequency-modulated in batch and a second signal, the apparatus is configured to receive the optical signal including one of the FM batch converted signal and the second signal and to add it with the other signal to transmit, wherein:

the center frequency of the FM batch converted signal is set to be less than or equal to a value obtained by subtracting the half of the occupied frequency bandwidth of the FM batch converted signal and the half of the occupied frequency bandwidth of the second signal from the center frequency of the second signal.

Claim 18 is allowed because the prior arts of record do not teach or disclose an optical signal transmitting method for transmitting a FM batch converted signal with a frequency-multiplexed first signal being converted and frequency-modulated and a second signal as an optical signal, the method includes transmitting the optical signal including the FM batch converted signal and the second signal wherein:

the center frequency of the FM batch converted signal is set to be less than or equal to a value obtained by subtracting the half of the occupied frequency bandwidth of the FM batch converted signal and the half of the occupied frequency bandwidth of the second signal from the center frequency of the second signal.

Claim 24 is allowed because the prior arts of record do not teach or disclose an optical signal receiving method for receiving an optical signal including a FM batch converted signal with a frequency-multiplexed first signal being frequency-modulated in batch and a second signal, the method includes receiving the optical signal to demodulate the FM batch converted signal and the second signal, wherein:

the center frequency of the FM batch converted signal is set to be less than or equal to a value obtained by subtracting the half of the occupied frequency bandwidth of the FM batch converted signal and the half of the occupied frequency bandwidth of the second signal from the center frequency of the second signal.

Claim 29 is allowed because the prior arts of record do not teach or disclose an optical signal relaying method for transferring an optical signal including a FM batch converted signal with a frequency-multiplexed first signal being frequency-modulated in batch and a second signal, the method includes receiving the optical signal including one of the FM batch converted signal and the second signal and adding it with the other signal to transmit, wherein:

the center frequency of the FM batch converted signal is set to be less than or equal to a value obtained by subtracting the half of the occupied frequency bandwidth of the FM batch converted signal and the half of the occupied frequency bandwidth of the second signal from the center frequency of the second signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gilden et al (US Patent No. 4,868,894) is cited to show system for transmitting microwave signals via an optical link.

Fuse (US Patent No. 6,486,986) is cited to show system for optically transmitting frequency-division-multiplexed signal and transmitter therefor.
